

1. The comments provided address specific administrative changes to the look of the document needed and other comments are provided for the team to consider making PD and requirements improvement changes now, rather than dealing with some of these issues later. These changes should be made prior to the next submission.

2. Page number the submittal for next time. The title page should not have a page number while the rest of the pages have page numbers. Add a “table of contents” page; this page should be numbered ii and should list the major sections of this document and their starting page number. Pages that follow should be numbered in Arabic (1, 2, 3, etc.) and start with 1.

Later it should take around 10min to do that.

3. For the Project Description

a. Add line numbers for “Functions of the software” too.

Should we continue the numbers from the description or do we need to add them as new lines?

b. When creating your team requirement be sure to include the references from the two-paragraph summary as well as from the functions of the software listing.

Requirements must be from the User Description and Functions of software.

4. For the requirements:

a. Requirements are written in the form, “The app shall . . .”. Consider rewriting all these requirements to include this specific form. Use complete sentences and try to have each requirement stand by itself and make sense, be testable.

Should work on it to get a clarity

b. R2 states create a task but the line reference discusses creating a task individually or within a section. It seems like there should be 2 requirements here to address those cases.

c. R4 is probably more than just this 1 requirement. Referencing line 13 – 15, it seems the requirement should more completely specify the relationship between deadlines and priorities. Exactly when will the user be notified? x minutes or hours before the deadline if priority 1 but (different for priority 2 or lower)??

Should work on the logic of Professor's doubt.

1. How much time from the deadline does the notification buzz?
 - a. Can users have custom time from the deadline to remind them?
2. How does the notification feature affected by different priorities?
 - a. Critical: 24 hours from deadline
 - b. Medium: 4 hours from deadline
 - c. Low: 30 minutes from deadline

d. R5 doesn't seem like a requirement as written.

e. R5.1 Each task has a complete checkbox. It seems like each task has a number of items connected to it including a complete box. What is different here?

So when a user tries to complete a task before the app reminds him the user can change the status of the task manually.

f. Still missing a number of requirements from the PD.

What features are we still missing from a basic Reminder APP, that professor expects. He mentioned in feedback given on [Feb-28](#).
