

1. Requirements: These requirements look better. The team is still missing requirements for task filtering and the dashboard functionality as stated in the PD, last 2 functionalities. Are there any requirements for default parameters for: categories (like standard categories a user can pick from or add their own which then becomes part of the standard listing of categories), priority assignment at task origination (set to lowest priority maybe), due dates (date picked is 2 days away by default else pick a new date), notifications (off or on), etc.? How many tasks are we allowing the user to maintain in the list? How long can tasks be active? A day, a week, a month, a year, 5 years? We should probably state this somewhere either in the requirements or the PD and requirements. Will each task be assigned a task ID and a time and date stamp when it is originated by the user so we can filter on date originated or task ID or other? Can a task be edited after it has been saved? Can it be deleted or duplicated?

2. The team needs to work faster now.
