

1. Requirements: These requirements look better. The team is still missing requirements for task filtering and the dashboard functionality as stated in the PD, last 2 functionalities. Are there any requirements for default parameters for: categories (like standard categories a user can pick from or add their own which then becomes part of the standard listing of categories), priority assignment at task origination (set to lowest priority maybe), due dates (date picked is 2 days away by default else pick a new date), notifications (off or on), etc.? How many tasks are we allowing the user to maintain in the list? How long can tasks be active? A day, a week, a month, a year, 5 years? We should probably state this somewhere either in the requirements or the PD and requirements. Will each task be assigned a task ID and a time and date stamp when it is originated by the user so we can filter on date originated or task ID or other? Can a task be edited after it has been saved? Can it be deleted or duplicated?

1. In PD functionalities we did not add the last 2 functionalities in Requirements.
 - a. Dashboard Functionality:
 - i. Mentioned that a list view of tasks will be displayed
 - ii. Grid view for tasks in that particular week
 - b. Filtering
 - i. I did not get clear picture of how we are planning to filter those apps..But my understanding is:
 1. Filter dropdown menu which has priority category Critical, medium and low
2. Are we giving default parameters for:
 - a. Categories,
 - b. Sections,
 - c. Priority,
 - d. Due date,
 - e. Notification
3. The number of tasks in the list will be 10
 - a. Completed tasks are not shown. They are deleted. (or) if we want to show completed tasks we must store them again in DB and due to constraints in DB we are committing to a fixed amount of tasks to be shown. But can be added later.
4. Tasks are active around 3 months
 - a. So a user can create a task that is due for 3 months and not beyond that.
 - b. We are not planning to store completed tasks.
5. No task ID

6. Edited - Yes
7. Deleted or Duplicated - Maybe.

2. The team needs to work faster now. Should do

1. Title Page
2. Project Description with Line Numbers
3. Requirements with Req'mt. numbers, description, and source line numbers
4. High-Level Use Cases- draft-1 done
5. Use Case Diagram - working
6. Requirements User Case Traceability Matrix- partially done
7. Increment Matrix- should start
8. Domain Model- cannot start until 5 and 6 is done
9. Presentation slides
