

### 1. Title page is missing Iteration # and date.

Next time add time and date below title.

### 2. Requirements: For the line number references, should also include source references to lines 19-33 and 37-39. For constraint #3, does this mean that as soon as I mark a task as complete with the checkbox, that the task can no longer be retrieved? I cannot get a list of completed tasks for the day or the week? Missing filtering requirements, line 37-38.

1. For line references include source references- so do we need to include functions also as they are covered in requirements? Example: Line22 in functions had already been added as Requirement R1 which refers to line 9 in PD.
2. Yes, completed tasks are not retrieved.
3. No, you cannot get tasks for day and week.
4. Filter requirements not added in requirements.

### 3. HLUC: OK

No action is needed.

### 4. UCD: OK, but see name for HLUC4 – these need to be exactly the same on both drawings. Same for UC7, UC6.

Remove

1. + after the name of HLUC-4 → HLUC- Assign Name but UCD- Assign Task Name so check those.
2. HLUC -6,7 total name is not mentioned in UCD.

### 5. RUCTM: OK

No action is needed. But work with team to check if we can complete all the tasks.

### 6. IM: OK

No action is needed.

7. DD: Does the Notification class have an association with the user class? Does a task have a creation date and time attribute? Does a task have a status and priority attribute? Does dashboard have an association with the task class? Would the dashboard class have attributes of current day and current week (for other lists)?

1. Does the notification have an association with the user? - No
2. creation date and time attribute: yes which is represented in dueDate attribute which appears as the date and time picker making both as 1 single attribute.
3. Does Task have status and priority attributes? Yes...but we should think....how to include it...
4. No dashboard just displays the summary. It is just another view of the tasks with summary, and due dates.
